

ELK的Docker部署方案

主节点部署：

1、把这个对应的部署文件放到/opt目录下面

[docker-elk](#)

2、进入对应的/opt/docker-elk

```
yaml
# 运行对应的docker-compose.yml文件
cd /opt/docker-elk
docker-compose up -d
```

3、对应地址、用户、密码

对应web页面UI地址

```
yaml
http://192.168.1.107:5601
```

默认用户信息

```
yaml
# 用户名
elastic
# 密码
changeme
```

信息采集节点部署：

1、创建对应目录

```
yaml
mkdir -p /opt/elk-agent/filebeat
cd /opt/elk-agent/filebeat
sudo chmod 777 /opt/elk-agent/filebeat
sudo touch docker-compose.yml && sudo chmod 777 docker-compose.yml && sudo touch filebeat.yml && sudo chmod 777 filebeat.yml
```

2、编辑对应docker-compose.yml文件

```

yaml
version: "3.8"
services:
  filebeat:
    image: docker.elastic.co/beats/filebeat:8.6.0
    container_name: filebeat
    user: root
    network_mode: host
    command: ["-e", "--strict.perms=false"]
    restart: unless-stopped
    volumes:
      - ./filebeat.yml:/usr/share/filebeat/filebeat.yml:ro
      - /var/log:/var/log:ro
      - /var/lib/docker/containers:/var/lib/docker/containers:ro
      - /var/run/docker.sock:/var/run/docker.sock:ro

```

3、编辑对应filebeat.yml文件

```

yaml
filebeat.inputs:
  # 1) 普通系统/应用日志: 不要 ndjson/json 解析
  - type: filestream
    id: plain_logs
    enabled: true
    paths:
      - /var/log/syslog
      - /var/log/auth.log
      - /var/log/kern.log
      - /var/log/*.log
      - /opt/app/logs/*.log
    exclude_files: ['\'.gz$']
    fields_under_root: true
    fields:
      source_node: "192.168.1.108" #注意更改节点主机IP

  # 2) Docker 容器日志: 才用 ndjson
  - type: filestream
    id: docker_logs
    enabled: true
    paths:
      - /var/lib/docker/containers/*/*-json.log
    parsers:
      - ndjson:
          target: ""
          add_error_key: true
          message_key: log
    fields_under_root: true

```

```
fields:
  source_node: "192.168.1.108"    #注意更改节点主机IP

output.logstash:
  hosts: ["192.168.1.107:5044"]   #主点主机IP

setup.ilm.enabled: false
setup.template.enabled: false
logging.level: info
```

4、运行对应的docker-compose配置

```
yml
cd /opt/elk-agent/filebeat
docker-compose up -d
docker logs -f --tail 80 filebeat
```
